

Name of project:
1. Intellicone
2. WayFinder
3.Sensorio

Function:

1. Using voice recognition module to let the user pick the choice of setting between elderly or visually impaired.
2. The cane also has obstacle detection and distance measurement for both choices.
3. It has user feedback via vibration.
4. It also has GPS system integrated.
5. MPU 6050 is used to alert the family and user if cane is stolen or the user is in an emergency.
6. Automatic light system during dark environments.
7. Portable chargeable battery pack.
8. Emergency alert button on the cane itself in case of emergency.

Components:

Name	Quantity
ESP32	1 (2 is optional)
Vibration module	1
Microphone (Optional)	1
Speaker (Optional)	1
TRSS 3.5mm audio jack module	1
Raspberry Pi 5	1
GPS module with sim card (Optional)	1
GPS module via antenna	1
Battery	4
Charging module	1
Relay	1
LIDAR sensor	1
MPU 6050	1
High-Bright White LED	1
LDR Sensor	1
SIM module (not sure yet)	1
Buck-Boost Converter	1
